

## Updating Norton AntiVirus for Mac OS X to 8.0.4

Since the release of Norton AntiVirus 8.0, Symantec has released an update to version 8.0.4. It is recommended that you update your Norton software to the latest version, 8.0.4. To do so, please download the update from <http://antivirus.nih.gov/software/symantec.asp>. Then install the update following the directions below.

Download the update file from NIH and open the packaged file.

Double click on the icon  
**"Install Norton AntiVirus."**

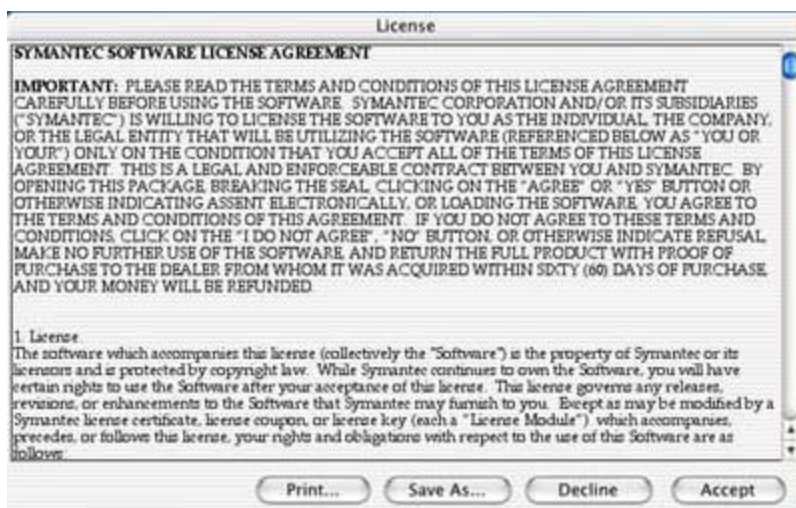

To install the update, you must have admin privileges on your machine.

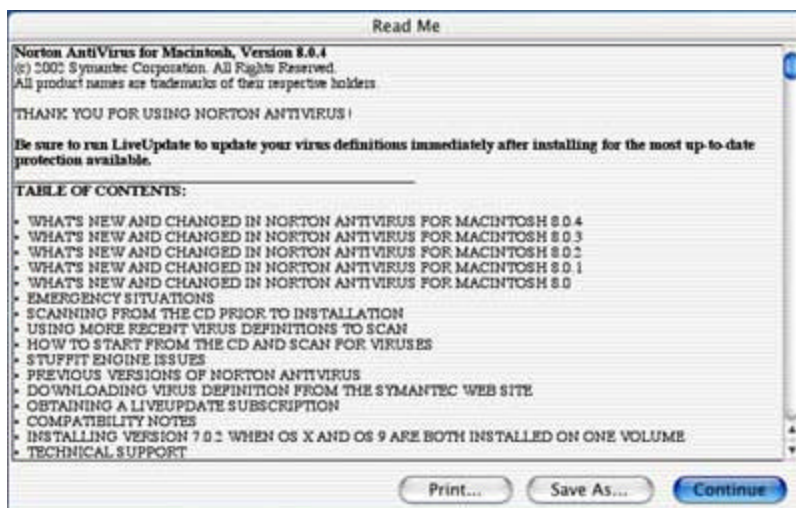

Enter your **password** and click **OK**.

Click **Continue** on the Norton AntiVirus splash screen.

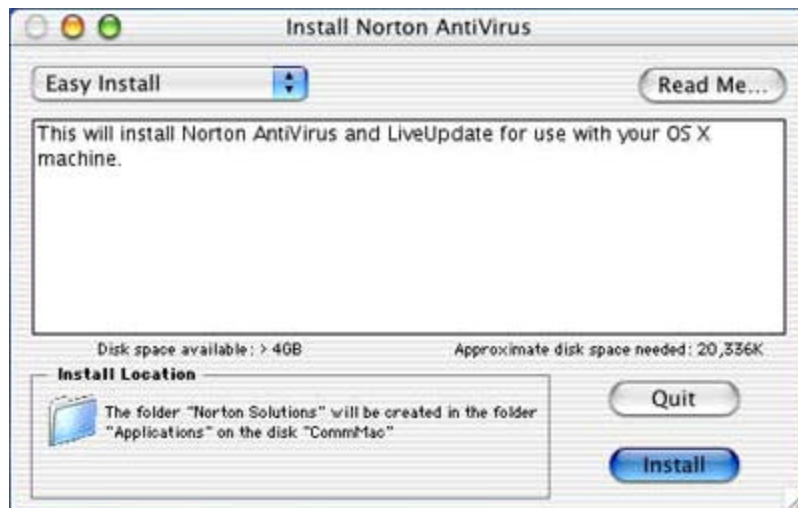

You must accept the License Agreement in order to install the update. Read the agreement and click **Accept** to continue.

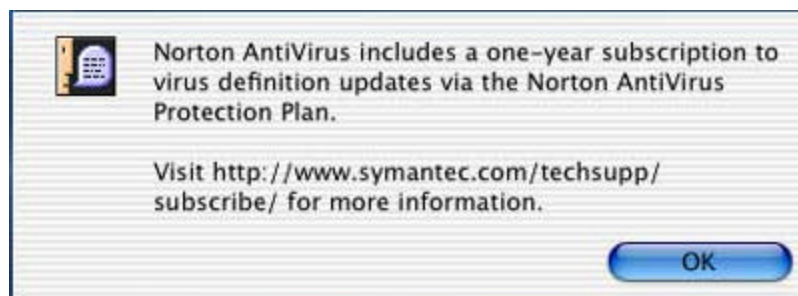

Setup will display the Read Me file.

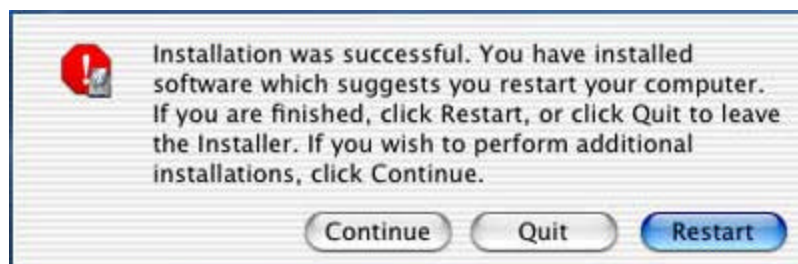

Click **Continue** when you are ready to continue with the installation.

Click **Install** to accept the default installation settings and continue with the installation.

The software includes a one-year subscription for virus definition updates. Click **OK** to continue.

When the installation is complete, you must restart your computer. Click **Restart** to restart now.
